## R 07/08 Technical Data

Electric tractors/platform trucks

In accordance with VDI guidelines 2198, this specification applies to the standard model only.  
Alternative tyres, mast types, ancillary equipment, etc. could result in different values.

## Dimensional sketch and operating data

When hauling loaded trailers that are coupled to platform or towing trucks under the most arduous of operating conditions (e.g. sloping surfaces, smooth or slippery roadways, etc.) the determining factor for trailing load assessment will not be the tractive effort developed by the towing truck, nor the carrying capacity of the relevant trailers, but rather the presence of an effective brake system eliminating the risk of accidents (i.e. by using trailers equipped with brakes of the overrun type).

When towing trailer trains on public roads, the Road Traffic Regulations must be adhered to. The values contained in this specification and data sheet, including the performance charts, apply to tractors operating on a dry concrete surface.

Rolling resistance on level surface: 200 N/t.

Frictional coefficient for tyres: 0.80;

Height of towing bracket: 400 mm.

Tipping limit: the static load on the steered wheels is 20% below the net weight of the tractor.

**Electric Platform Truck R 08-20**

The models depicted in this brochure may contain special parts or attachments which are not supplied as standard.

Performance Chart R 07-25

The Speed/Draw Bar Pull performance of the tractor can be programmed between the two limits shown to suit the application. The permissible haul per hour is the total distance travelled, including the return journey and any downhill gradients. It is recommended that braked trailers are used for trailer loads exceeding 9 tonnes and for all trailer loads if gradients are involved.

Performance Chart R 08-20

The permissible haul per hour is the total distance travelled, including the return journey and any downhill gradients. It is recommended that braked trailers are used for all trailer loads if gradients are involved.

### Drive.

- The encapsulated 80 volt three-phase drive motor from STILL gives long life and freedom from maintenance, with optimal energy utilisation.
- During braking the drive motor acts as a generator and feeds electrical energy back into the battery. This allows a longer period of work before the battery needs recharging.
- Due to the regulated drive control, the travel speed will remain constant for the same pedal position regardless of upward or downward gradients.

### Battery and battery changing.

Battery changing is by means of a hoist. On the R 08-20 the battery can also be removed from the side with a low lift pallet truck.

### Electrical system.

The trucks are fitted with an energy saving MOSFET controller. Drive and steering unit are linked through a CAN bus to the combi instrument. Constant checks guarantee fault-free operation.

### Brakes.

- The truck has three independent braking systems.
- Disc brakes at the front and maintenance free multi-disc brakes in an oil bath at the back are actuated hydraulically with the brake pedal.
- A mechanical handbrake acts on the rear wheels.

### Steering.

- The servo-steering is extremely free moving and allows fatigue-free driving.
- The sturdy steering axle gives the truck very good manoeuvrability and makes it extremely manageable.

### Frame.

The flat, shock resistant chassis is specified and designed in accordance with FEM. Due to its robust steel structure it has very high resistance to distortion and high rigidity. The design prevents the accumulation of water at any point in the frame. This corrosion protection guarantees a long life.

### Lighting.

- Road Traffic Act lighting system fitted as standard.
- Rear lights can be fitted at the top of the overhead guard as an option.
- Optimum rear visibility thanks to the large viewing channel of the R 07-25.

### Driver's compartment.

- Automotive style foot pedal layout.
- Seat and steering column are adjustable.
- On the R 07-25 the driver has a clear view onto the tow coupling from the driving compartment.
- Convenient entry and exit and also a relaxed leg position due to the low step height, large footwell and anti-slip liner.
- Excellent all-round visibility.

### Standard equipment.

- Sprung driver's seat, PVC.
- Passenger's seat, PVC.
- Pneumatic tyres.
- Work hour meter through key switch and seat switch.
- Paint RAL 2000/RAL 7021.
- Forward/reverse inching button device on the R 07-25.
- Automatic coupling, rear.
- Trailer socket

### Auxiliary equipment.

- Tow coupling, front (1 x automatic or three position coupling).
- Tow coupling, rear (2 x automatic coupling, three position or automatic remote coupling).
- Cloth covered seat (with or without seat heater).
- SE tyres.
- Power supply can be extended with a 12 volt converter for auxiliary electrics.
- The R 08-20 can be customised for use in any industry by fitting additional equipment.
- Cab for the R 07-25 also available with sliding doors.
